Amendments to the Claims:

The following claims will replace all prior versions of the claims in this application (in the unlikely event that no claims follow herein, the previously pending claims will remain):

- 1. (Cancelled).
- 2. (Currently Amended) An automotive engine oil comprising a base oil and an antiwear additive system comprising an ester which is the reaction product of
 - (a) at least one polyfunctional alcohol;
 - (b) a dimer fatty acid having a dimer content of greater than 94% by weight; and
 - (c) at least one of an aliphatic dicarboxylic acid having 5 to 18 carbon atoms, an aliphatic monocarboxylic acid having 5 to 24 carbon atoms and an aliphatic monofunctional alcohol having 5 to 24 carbon atoms; atoms with

wherein the resultant ester having-has a kinematic viscosity at 100 °C ranging from 500 to 5000 mm²/s and a non-polarity index (NPI)

of at least 500.

- 3. (Currently Amended) The An-automotive engine oil of claim 2, according to claim 1 wherein (c) is an aliphatic dicarboxylic acid having 5 to 18 carbon atoms.
- 4. (Currently Amended) The An-automotive engine oil of claim 2, according to claim 1 wherein the polyfunctional alcohol is a polyol of formula R(OH)n where n is an integer which ranges from 1 to 10 and R is a hydrocarbon chain of 2 to 15 carbon atoms where the polyol is of molecular weight in the range from 50 to 650.
- 5. (Currently Amended) The An-automotive engine oil of claim 2, according to claim 1 wherein the resultant ester has a kinematic viscosity at 100 °C of 900 to 4000 mm²/s.

U.S. Patent Application No. <u>10/591,690</u> Amendment/Response dated June 3, 2009 Page 3 of 8

- 6. (Currently Amended) <u>The An-automotive engine oil of claim 2, according to claim 1</u> wherein the resultant ester has an NPI value of at least 900.
- 7. (Currently Amended) <u>The An-automotive engine oil of claim 2, according to claim 1</u> wherein the resultant ester has an average molecular weight of at least 3000.
- 8. (Cancelled).
- 9. (Currently Amended) <u>The An-automotive engine oil of claim 2, according to claim 1</u> wherein the antiwear additive system further comprises a phosphorus-containing and/or sulphur-containing antiwear additive.
- 10. (Currently Amended) <u>The An-automotive engine oil of according to-claim 9 wherein</u> the further antiwear additive is both a phosphorus-containing and sulphur-containing additive.
- 11. (Currently Amended) <u>The An-</u>automotive engine oil <u>of according to claim 9 wherein</u> the futher antiwear additive is zinc dialkyl dithiophosphate.
- 12-14. (Cancelled).
- 15. (Currently Amended) A method of reducing wear in an automotive engine by the addition of an automotive engine oil comprising a base oil and an ester which is the reaction product of
 - (a) at least one polyfunctional alcohol;
 - (b) a dimer fatty acid having a dimer content of greater than 94% by weight; and
- (c) optionally at least one of an aliphatic dicarboxylic acid having 5 to 18 carbon atoms, an aliphatic monocarboxylic acid having 5 to 24 carbon atoms and an aliphatic monofunctional alcohol having 5 to 24 carbon atoms; atoms with wherein the resultant ester having has a kinematic viscosity at 100 °C ranging from 500 to 5000 mm²/s and a non-polarity index (NPI)

NPI =	total number of carbon atoms * molecul. weigh
	number of carboxylate groups x 100

U.S. Patent Application No. <u>10/591,690</u> Amendment/Response dated June 3, 2009 Page 4 of 8

NPI = total number of carbon atoms x molecular weight
number of carboxylate groups x 100

of at least 500; and wherein the automotive engine oil has a phosphorus level of no more than 0.08%.

- 16. (Currently Amended) An antiwear additive system comprising an ester which is the reaction product of
 - (a) at least one polyfunctional alcohol;
 - (b) a dimer fatty acid having a dimer content of greater than 94% by weight; and
- (c) optionally at least one of an aliphatic dicarboxylic acid having 5 to 18 carbon atoms, an aliphatic monocarboxylic acid having 7 to 24 carbon atoms and an aliphatic monofunctional alcohol having 7 to 24 carbon atoms; atoms with wherein the resultant ester having-has a kinematic viscosity at 100 °C ranging from 500 to 5000 mm²/s and a non-polarity index (NPI)

	NPI = total number of carbon atoms * molecul. weight
	number of carboxylate groups x 100
	, , ,
1	NPI = total number of carbon atoms x molecular weight
	14F1 - total number of carbon atoms x molecular weight
	number of carboxylate groups x 100

of at least 500.

- 17. (Currently Amended) An automotive engine comprising an automotive engine oil comprising a base oil and an antiwear additive system comprising an ester which is the reaction product of
 - (a) at least one polyfunctional alcohol;
 - (b) a dimer fatty acid; and
- (c) optionally at least one of an aliphatic dicarboxylic acid having 5 to 18 carbon atoms, an aliphatic monocarboxylic acid having 5 to 24 carbon atoms and an aliphatic monofunctional alcohol having 5 to 24 carbon atoms; atoms with wherein the resultant ester having-has a kinematic viscosity at 100 °C ranging from 500 to 5000 mm²/s mm2/s-and a non-polarity index (NPI)

U.S. Patent Application No. <u>10/591,690</u> Amendment/Response dated June 3, 2009 Page 5 of 8

NPI = total number of carbon atoms * molecul. weight
number of carboxylate groups x 100
NPI = total number of carbon atoms x molecular weight
number of carboxylate groups x 100

of at least 500.

- 18. (New) An automotive engine oil comprising a base oil and an antiwear additive system comprising an ester which is the reaction product of:
 - (a) at least one polyfunctional alcohol;
 - (b) a dimer fatty acid; and
- (c) at least an aliphatic dicarboxylic acid having 5 to 18 carbon atoms; wherein the resultant ester having a kinematic viscosity at 100 °C ranging from 500 to 5000 mm²/s and a non-polarity index (NPI)

NPI = total number of carbon atoms x molecular weight number of carboxylate groups x 100

of at least 500.

- 19. (New) A method of reducing wear in an automotive engine by the addition of an automotive engine oil comprising a base oil and an ester which is the reaction product of:
 - (a) at least one polyfunctional alcohol;
 - (b) a dimer fatty acid; and
- (c) at least an aliphatic dicarboxylic acid having 5 to 18 carbon atoms; wherein the resultant ester having a kinematic viscosity at 100 °C ranging from 500 to 5000 mm²/s and a non-polarity index (NPI)

NPI = total number of carbon atoms x molecular weight number of carboxylate groups x 100

of at least 500; and

wherein the automotive engine oil has a phosphorus level of no more than 0.08%.

U.S. Patent Application No. <u>10/591,690</u> Amendment/Response dated June 3, 2009 Page 6 of 8

- 20. (New) An antiwear additive system comprising an ester which is the reaction product of:
 - (a) at least one polyfunctional alcohol;
 - (b) a dimer fatty acid; and
- (c) at least an aliphatic dicarboxylic acid having 5 to 18 carbon atoms; wherein the resultant ester having a kinematic viscosity at 100 °C ranging from 500 to 5000 mm²/s and a non-polarity index (NPI)

NPI = total number of carbon atoms x molecular weight number of carboxylate groups x 100

of at least 500.

21. (New) The automotive engine oil of claim 2, wherein the at least one polyfunctional alcohol is neopentylglycol; and the component (c) is azeleic acid.
